

Claims Sync Bot

Effortlessly cross-reference Carrier Claim Reports
with your BMS data.

A bot designed to review Carrier Claim Reports provided in an Excel spreadsheet and cross-reference them with BMS Claim data. It rectifies BMS data to align with Carrier data if discrepancies are detected or validates the accuracy of existing BMS data. Subsequently, the bot produces a post-processing status report, indicating the status of each data entry, and delivers it to the designated contact person.

Bot Steps

- 1 Scans Claim Report from Carrier.
- 2 Perform a thorough comparison of the Claim Report with the BMS Data.
- 3 Identify any inconsistencies or discrepancies between the two sets of data.
- 4 Resolve these discrepancies by making necessary adjustments in the BMS to align with the Carrier's data.
- 5 Conclude the process by sending an email containing a comprehensive report of the entire procedure back to the designated point of contact.
