

Active Cyber Insurance For UK Mid-Market Clients

Cyber insurance is a crucial consideration for mid-market clients¹. These companies are increasingly targeted by cybercriminals, and with ransomware, phishing and data breaches leading to financial loss, operational downtime and reputational damage, the cost of an incident can be crippling.

Active Insurance offers a holistic approach to cyber insurance by combining comprehensive insurance coverage with proactive cybersecurity and risk management.

Expert sales support

Coalition can join client meetings to help you with the cyber insurance sales process. Clients can meet Coalition specialists with expertise in underwriting, claims, incident response and security, enabling them to address concerns.

Tabletop exercises

Tabletop exercises are designed to test clients' incident response plans. The exercises can cover different scenarios, including ransomware attacks and social engineering scams, bringing together the relevant stakeholders.

Policyholder onboarding

Coalition can host an onboarding session for mid-market policyholders, which can cover areas such as what to expect from coverage, how to get the most from Coalition Control[®] and what the claims and incident response process looks like.³

Robust insurance coverage

Coalition offers insurance coverages that help policyholders respond to events such as ransomware, data breaches, social engineering and cyber crime, with coverage for funds transfer fraud, cyber extortion and business interruption loss. Coalition can offer limits up to £10M.⁴

Security tools and support²

All clients get access to Coalition Control[®], which provides real-time monitoring and vulnerability scanning as well as threat alerts and recommendations for remediation. Coalition's pre-claims assistance enables the reporting and mitigating of potential incidents without the need to make a formal claim.
